Calendar Scheduling Tool

The *CALENDAR* Scheduling Tool is part of the CH1000-series Security Communications Systems. *CALENDAR* provides everything you need to schedule time tone, program, video surveillance, and output events on a CH1000 Security Communications System. All of the required steps to schedule a timed event on a CH1000 are presented in an easy to understand wizard format. *CALENDAR* uses a standard day-month-year calendar. Events can be scheduled years in advance if needed. The events are displayed in a graphical calendar view which makes keeping track of things easier. Schedule files can be saved locally for backup and are small enough to email. No dedicated computer is required, and access is through an Ethernet port via a direct connection, LAN, or WAN to the CH1000 system.
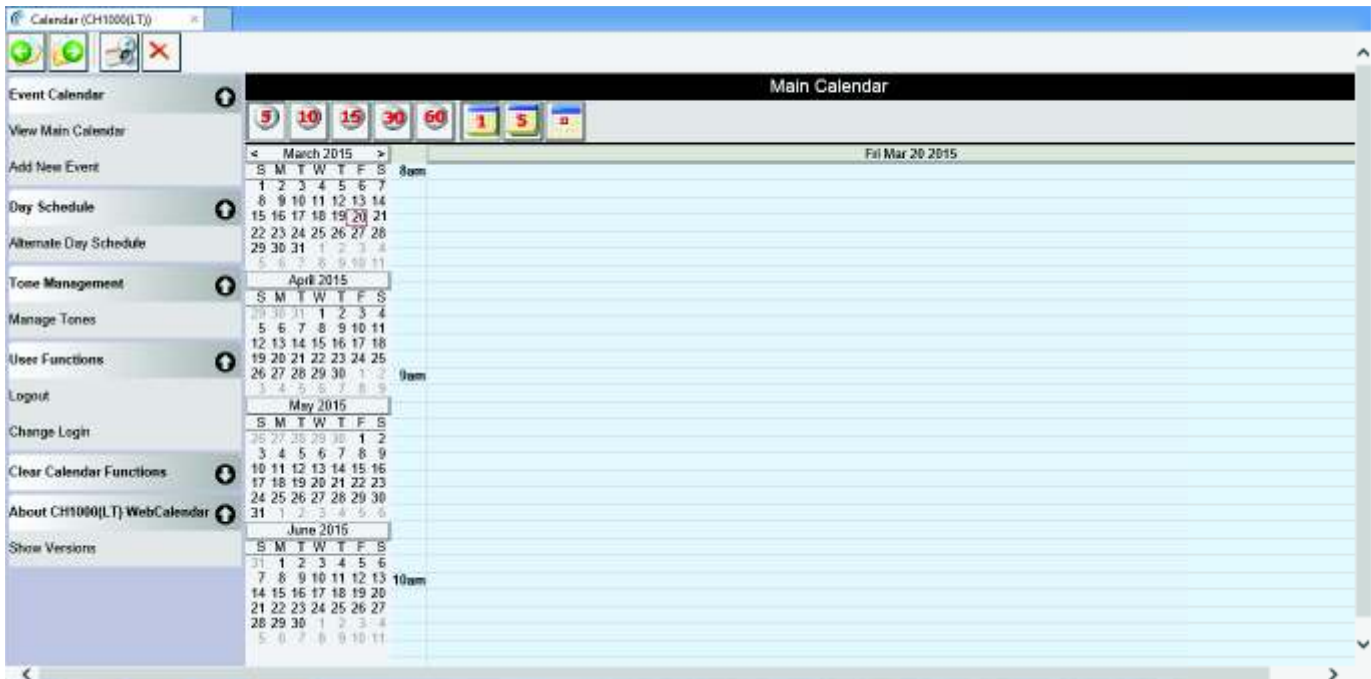

Every CH1000 system comes with a copy of *CALENDAR*. *CALENDAR* is compatible with Microsoft Windows® XP, and Vista, 7, 8.

Web Calendar Scheduling Tool

The Web *CALENDAR* Scheduling Tool is part of the CH1000-series Security Communications Systems.

The advantages of using Web Calendar™ over the desktop version is that there is no installation required. As long as there is a CH1000(LT) connection and an available Internet browser, then Web Calendar™ is functional. Web Calendar™ can also be used on Mac Computers.

Web calendar is compatible with any HTML5 compliant browser including (but not limited to):

- *Chrome (v40)*
- *Firefox (v36)*
- *Safari (v8)*
- *Internet Explorer (v11)*
