For the Safety of Seniors**

West-Com

Nurse Call Systems, Inc.

Provide Peace of Mind for Residents, Family Members and Care Providers

Increase Residents' and Patient Safety

OneCare provides seniors the freedom to engage in daily life activities while at the same time promoting a sense of security, dignity and control. Wireless pendants give residents and family members confidence that caregivers will be notified and respond quickly if help is needed. Wander prevention solutions monitor and control exit doors, windows and outside gates. Alerts are sent out immediately to caregivers' wireless pagers and two-way radios. An alert is also displayed in the staff area on the electronic alert panel. Wired patient stations and pull cords are used in skilled nursing areas for a UL 1069 compliant system.

Activity Reports

OneCare's reporting option records all events that occur in the system allowing reports to be generated showing the time, location or ID of the device that reported the alert. The report can also include alerts from other systems and devices that are connected to or interfaced with the OneCare solution. Reports are setup using West-Com's web application interface that runs in a web browser and allows for reports to be stored and automatically sent on a defined time schedule.

OneCare provides caregivers the tools necessary to respond quickly to residents in an emergency as well as notify them when residents are in high-risk areas. Care providers can receive a text message when a resident presses their wireless pendant, gets out of bed at night, enters their bathroom or does not return from the bathroom after a specified length of time. Wireless fall prevention pads can be used to notify staff when a resident is getting out of a wheelchair or bed without the necessary assistance. Bathrooms and other private or high fall risk areas can also utilize an emergency pull cord station to allow residents to call for help if needed. You can even connect fire detectors into the wireless solution.

Advanced Integrated Solutions

Wired and wireless components available for a complete senior living solution

Improve Communication with Care Providers

- Supports messaging to wireless devices such as pagers or two-way radios with messaging capabilities
- Simple alert interface that is easy to read
- Low battery notification ensures residents' pendants are fully functional
- Be notified when residents get up to use the bathroom at night
- No computer needed
- Rechargeable pendants available
- Solution provides wander protection, fire safety, fall awareness and emergency call capabilities
- Capable of producing activity reports
- Interfaces with electronic resident status boards used for check-in and other passive notifications

Novus® OneCare Advantage

- Improve residents' safety
- Provide residents freedom and control
- Skilled nursing solutions
- Rechargeable pendants available
- Incorporate wireless pressure pads to detect patient falls
- Interface to fire and smoke detectors
- Wander protection solution available
- Independent door monitoring
- Resident status boards for passive notifications like check-in
- Wired and wireless options
- Battery low notification displays on annunciator
